Subject: O365 Pilot – Use of Personal Devices
Date: Tuesday, September 29, 2015 12:24:00 PM

Who: All O365 Pilot Users

What: O365 Pilot – Use of Personal Devices

Info: Pilot user testing does not require anyone to use a personal device. However, if any pilot users want to test from home devices, they need to verify two things before connecting:

- 1) Please get permission to access Office 365 on a personal device from your supervisor/manager.
- 2) Verify that you have antivirus on your home machine, and that it is up to date.

Why: The reason for this is some home computers may be infected with a virus or malware if their anti-virus software is out of date. We also want to ensure pilot users are following current policies within their department/agency in regards to working from home. Thank you.

If you have any questions, please “submit feedback” at the bottom of the DII Pilot webpage:
